RESEARCH AND REPORTING

Social Development Internship

Vishalakshi Foundation

Internship Duration: 04 June 2026 – 06 July 2026

Submitted by

SAKSHI PRIYA

B.Tech – Computer Science and Engineering

IILM University, Greater Noida

Academic Session 2026

Submitted in partial fulfilment of the requirements for the internship component of the B.Tech programme

1. CANDIDATE'S DECLARATION

I, Sakshi Priya, hereby declare that this internship report entitled “Research and Reporting Internship at Vishalakshi Foundation” is an original record of the work and learning undertaken by me during my internship from 04 June 2026 to 06 July 2026.

The report has been prepared for academic submission and presents my understanding of the responsibilities, research activities, documentation practices, observations, and professional learning gained during the internship. The work described in this report is based on the tasks performed by me in the role of Social Development Intern, with a primary focus on research and reporting.

I further declare that the information included in this report has been presented honestly and to the best of my knowledge. Wherever secondary information or external sources have been used, they have been acknowledged in the bibliography/references section.

I understand that any academic or organizational requirements concerning confidentiality, accuracy, and responsible use of information must be respected.

Name: Sakshi Priya

Programme: B.Tech – Computer Science and Engineering

Organization: Vishalakshi Foundation

Internship Period: 04 June 2026 – 06 July 2026

Signature: _____

2. ACKNOWLEDGMENT

I would like to express my sincere gratitude to Vishalakshi Foundation for providing me with the opportunity to undertake an internship as a Social Development Intern. This internship gave me practical exposure to research, information gathering, documentation, and professional reporting in the context of social development work.

I am especially thankful to the members and mentors associated with the organization for their guidance, support, feedback, and encouragement throughout the internship period. Their suggestions helped me understand how research can be converted into clear, structured, and useful reports for organizational purposes.

I am also grateful to my university and faculty members for encouraging practical learning through internship experiences. The internship helped me connect academic skills such as information analysis, communication, documentation, and presentation with real-world organizational requirements.

Finally, I would like to thank everyone who contributed directly or indirectly to my learning experience during this internship. The knowledge and professional habits gained through this experience will be valuable for my future academic and career development.

Sakshi Priya

3. INTERNSHIP COMPLETION CERTIFICATE

Certificate issued by Vishalakshi Foundation

The certificate confirms completion of the internship as a Social Development Intern from 03-06-26 to 05-07-26.

4. PROJECT DESCRIPTION

4.1 Introduction

The internship at Vishalakshi Foundation was undertaken as a Social Development Internship with a primary role in research and reporting. The internship provided practical exposure to how information related to social development activities can be collected, reviewed, organized, interpreted, and communicated in a professional format.

Research and reporting are important supporting functions in social development organizations. Before a programme, activity, or community initiative can be evaluated or documented, relevant information needs to be gathered from appropriate sources. This information may include background literature, organizational material, observations, activity details, beneficiary-related information where appropriate, and other relevant secondary sources.

My role focused on supporting this process through systematic information collection and documentation. The work involved understanding the purpose of the assigned research, identifying useful information, organizing findings, maintaining clarity in written communication, and preparing structured reports that could be reviewed by supervisors or used for documentation.

The internship also helped me understand that good reporting is not simply about writing a large amount of information. A useful report should be accurate, relevant, logically arranged, easy to read, and supported by appropriate evidence or references. Therefore, the internship combined research skills with communication and documentation skills.

This report presents the organization profile, problem statement, objectives, scope, tools, system architecture, methodology, expected outcomes, and supporting certificate/communication documentation related to the internship.

4.2 Organization Profile

Vishalakshi Foundation is the organization where the internship was completed. The internship certificate identifies the role as Social Development Intern and records the internship period from 04 June 2026 to 06 July 2026. The internship experience provided an opportunity to observe and support work connected with social development, research, documentation, and reporting.

As a foundation working in the social-development space, an organization such as Vishalakshi Foundation depends on clear communication and organized documentation to present its initiatives, activities, observations, and outcomes. Research helps establish an evidence-based understanding of an issue, while reporting helps convert that understanding into a form that can be communicated to mentors, organizational teams, academic institutions, and other stakeholders.

During the internship, the organizational environment helped me understand the importance of responsibility, professional communication, timely submission, and careful handling of information. I learned that research for social development should be approached with objectivity and sensitivity, particularly when information concerns communities, individuals, social conditions, or development challenges.

The internship also demonstrated the connection between technical/academic skills and non-technical professional skills. Organizing information, using digital tools, preparing structured documents, checking sources, editing written material, and presenting findings are transferable skills that are useful across many professional roles.

The organization therefore served as a practical environment in which I could develop research discipline, written communication, documentation habits, and an understanding of how structured information supports social-development work.

4.3 Problem Statement

Social development activities often generate information from multiple sources. If this information is not collected systematically and documented clearly, important observations may be difficult to retrieve, compare, communicate, or use for future planning. Unstructured information can also make it harder for an organization to present its work in a consistent and understandable manner.

The problem addressed during this internship was therefore the need for organized research and reporting support: identifying relevant information, checking and consolidating it, arranging findings logically, and preparing clear documentation that could communicate the subject of study effectively.

The challenge was not limited to gathering information. It also involved deciding what information was relevant, distinguishing useful material from unnecessary details, maintaining consistency in terminology and presentation, and converting research findings into a coherent report.

The internship role addressed this challenge through a structured research-and-reporting workflow. The process emphasized clarity, relevance, documentation, review, and responsible presentation of information.

In simple terms, the problem can be expressed as follows: How can relevant social-development information be researched, organized, analyzed at an appropriate level, and converted into a clear and useful report for organizational and academic purposes?

4.4 Project Objectives

1. To understand the research and documentation requirements of a social-development organization.
2. To collect relevant information from appropriate primary and secondary sources as assigned.
3. To organize research material into clear categories for easier review and reporting.
4. To summarize important findings in a concise and understandable manner.

5. To prepare structured reports and written documentation according to the required format.
6. To improve professional writing, proofreading, editing, and presentation skills.
7. To maintain accuracy, consistency, and responsible use of information during documentation.
8. To develop practical understanding of how research supports social-development initiatives and organizational decision-making.

4.5 Scope of the Project

The scope of this internship project covers research and reporting activities carried out in support of social-development work at Vishalakshi Foundation. The role was primarily documentation-oriented rather than software-development-oriented. The focus was on understanding information needs, conducting research, organizing findings, and communicating results through structured written reports.

Area	Scope
Research support	Identifying and reviewing information relevant to assigned topics and activities.
Information collection	Gathering appropriate material from available organizational resources and reliable external sources.
Information organization	Sorting notes, observations, facts, and references into logical sections.
Analysis and interpretation	Comparing information, identifying major points, and developing concise observations without overstating conclusions.
Report preparation	Converting organized research into clear and professionally formatted reports.
Review and editing	Checking grammar, structure, consistency, readability, and completeness.
Documentation	Maintaining supporting references and internship evidence required for reporting.
Professional development	Improving communication, time management, teamwork, research discipline, and presentation skills.

The project does not claim to represent every activity of the organization. It specifically documents the internship learning and the research-and-reporting responsibilities performed during the stated internship period.

4.6 Technologies and Tools Used

The internship required practical use of common digital tools for research, documentation, communication, and report preparation. The exact tool used depended on the assigned task and the available organizational workflow.

Tool / Technology	Purpose
Web search / online research	Finding relevant background information and publicly available reference material.
Google Docs / Microsoft Word	Writing, formatting, editing, and organizing reports and documentation.
Google Sheets / Microsoft Excel	Organizing structured information, lists, basic tabulation, and simple data checking where required.
Email / digital communication	Receiving instructions, sharing work, requesting clarification, and submitting completed documents.
PDF tools	Reading reference documents and preparing or reviewing final report files.
Presentation tools	Preparing structured visual summaries when a research topic or findings required presentation.

The main technology involved was not a specialized software system but a digital research-and-documentation workflow. The value of these tools came from using them systematically: collecting information, maintaining organized notes, checking sources, drafting reports, reviewing content, and producing a professional final document.

4.7 System Architecture

For a research-and-reporting internship, the system architecture can be understood as a process pipeline rather than a software application. Each stage converts information into a more organized and useful form.

Stage	Description
1. Task / Research Requirement	Understand the topic, objective, expected output, deadline, and reporting requirements.
2. Source Identification	Identify suitable organizational documents, instructions, reference material, and reliable external sources.
3. Data / Information Collection	Collect relevant facts, notes, observations, and supporting material.
4. Screening & Verification	Remove irrelevant material and check information for consistency and source reliability.
5. Organization & Analysis	Group information into themes, compare relevant points, and identify key findings.
6. Report Drafting	Convert findings into structured sections using clear language and logical flow.
7. Review & Editing	Check accuracy, grammar, formatting, references, completeness, and readability.
8. Final Reporting	Submit the final report/document for review, record keeping, or further organizational use.

This architecture creates a traceable flow from the initial research requirement to the final report. It also makes review easier because each stage has a clear purpose.

**Research Requirement → Sources → Collection → Verification → Analysis →
Drafting → Review → Final Report**

4.8 Methodology

The methodology followed during the internship was based on a structured research and reporting cycle. The objective was to ensure that the final written output was relevant, understandable, and supported by organized information.

Step 1: Understanding the assignment

The first step was to understand the assigned topic, purpose of the research, expected report structure, required information, and submission timeline. Clarifying the expected output helped keep the research focused.

Step 2: Planning the research

The topic was divided into smaller information requirements. This made it easier to identify what needed to be researched and prevented unnecessary collection of unrelated information.

Step 3: Collecting information

Relevant information was gathered from available organizational material, instructions, reference documents, and suitable online sources. Information was recorded in an organized manner for later review.

Step 4: Screening and source checking

Collected material was reviewed for relevance and basic reliability. Duplicate, unclear, or unnecessary information was removed or kept separately for verification.

Step 5: Organizing findings

The useful information was grouped according to themes, headings, or report sections. This stage converted scattered notes into a structured knowledge base for writing.

Step 6: Analysis and summarization

Key points were identified and rewritten in concise language. Where comparison or interpretation was required, the emphasis was placed on evidence and avoiding unsupported claims.

Step 7: Drafting the report

The report was prepared with a logical sequence of introduction, background, objectives, findings/observations, conclusion, and references, depending on the requirement of the assigned work.

Step 8: Review and editing

The draft was checked for grammar, spelling, sentence clarity, repetition, formatting, and consistency. References and supporting material were also reviewed.

Step 9: Finalization and submission

After review, the final document was formatted according to the required academic/organizational standard and prepared for submission or record keeping.

Research Ethics and Responsible Reporting

Responsible reporting was treated as an important part of the methodology. Social-development research can involve information about people and communities, so information should be presented respectfully and without exaggeration. Personal or sensitive information should not be included unless it is necessary, authorized, and appropriate for the report. Sources should be acknowledged, and conclusions should remain consistent with the available evidence.

4.8 Methodology (continued)

Quality Checks Used During Reporting

- Relevance check – ensuring that each major piece of information contributes to the research objective.
- Accuracy check – checking names, dates, figures, terminology, and statements where supporting information was available.
- Source check – keeping track of where external information was obtained.
- Consistency check – maintaining consistent headings, terminology, formatting, and writing style.
- Clarity check – rewriting complex or repetitive material into simpler and more direct language.
- Completeness check – verifying that the required sections and supporting documents were included.
- Final proofreading – reviewing the complete document before submission.

Nature of Work Performed

The internship role of Research and Reporting involved a combination of analytical and communication-oriented tasks. The work required reading and understanding information, identifying relevant points, organizing material, preparing written content, and improving the presentation of the final document.

A key learning from this work was that research and reporting are iterative activities. A first draft is rarely the final product. Information may need to be reorganized, wording may need to be simplified, and the structure may need to be changed after review. Accepting feedback and making revisions therefore became an important part of the working process.

The internship also strengthened time-management skills. Research tasks can expand quickly when a topic contains a large amount of available information. Setting a clear purpose, prioritizing sources, and working toward a defined report structure helped keep the work manageable within the available time.

Skills Developed

Skill	Learning / Development
Research skills	Searching for, selecting, organizing, and summarizing relevant information.
Written communication	Preparing clear and professional reports using appropriate structure and language.
Documentation	Maintaining organized records, references, and supporting material.
Critical thinking	Distinguishing relevant information from unnecessary or weak material.
Editing and proofreading	Improving grammar, readability, consistency, and presentation.
Time management	Planning tasks and completing research/reporting work within deadlines.
Professional communication	Understanding instructions, responding to feedback, and communicating work status appropriately.

4.9 Expected Outcomes

The internship was expected to provide both a useful reporting output and meaningful professional learning. The major expected outcomes of the research-and-reporting role are described below.

1. A structured understanding of the assigned social-development research topics and their context.
2. Well-organized research material that can be reviewed and used for report preparation.
3. Clear, concise, and professionally formatted written reports.
4. Improved ability to identify reliable and relevant information.
5. Better understanding of the relationship between research evidence and social-development communication.
6. Improved documentation, editing, proofreading, and presentation skills.
7. Greater confidence in professional communication and receiving/responding to feedback.
8. Practical exposure to workplace expectations such as deadlines, accuracy, responsibility, and organized work.

Learning Outcomes

By the end of the internship, I developed a better understanding of how a research task moves from a broad question to a structured written output. I learned that effective reporting requires more than writing ability: it depends on research planning, information selection, organization, source awareness, review, and the ability to communicate findings according to the needs of the reader.

The internship also helped me understand the professional value of documentation. A well-prepared report can preserve organizational knowledge, communicate activities to stakeholders, support future planning, and provide evidence of work completed. This made reporting an important part of the social-development process rather than simply an academic requirement.

From a personal development perspective, the experience improved my discipline in handling information, my attention to detail, and my confidence in preparing formal documents. These skills are applicable to future academic projects, research work, internships, and professional roles.

Limitations

The internship was conducted for a limited period from 04 June 2026 to 06 July 2026. Therefore, the report reflects the work and learning within this period and should not be interpreted as a complete assessment of all activities or programmes of Vishalakshi Foundation.

The report also focuses specifically on the research-and-reporting role. It does not attempt to evaluate the organization's overall social impact, financial performance, programme effectiveness, or long-term outcomes because such evaluation would require a broader dataset, longer observation period, and additional organizational information.

4.10 Certificates of Completion and Other Communication Mail Proof

The internship completion certificate issued by Vishalakshi Foundation is included in Chapter 3 of this report. The certificate records the completion of the internship as a Social Development Intern and specifies the internship period as 04-06-26 to 06-07-26.

The certificate serves as the primary documentary proof of internship completion supplied for preparation of this report. It has been reproduced without alteration.

The report-format instructions also require supporting communication-mail proof to be attached. No separate communication-mail screenshot or email file was provided with the materials supplied for this report. Therefore, no email proof has been fabricated or recreated. If required by the university, the relevant internship instruction/submission email screenshots can be inserted on the following page as an annexure.

SPACE RESERVED FOR COMMUNICATION / EMAIL PROOF, IF REQUIRED

Conclusion

The internship at Vishalakshi Foundation was a valuable practical learning experience in the area of research and reporting. Working as a Social Development Intern provided exposure to information gathering, organization, analysis, documentation, and professional communication. The experience demonstrated how structured research can support social-development work by turning information into clear and usable reports.

The internship also helped bridge the gap between academic learning and workplace practice. Skills such as research, writing, editing, source awareness, time management, and professional communication are useful beyond this particular internship and can contribute to future academic and professional work.

Overall, the internship strengthened my confidence in handling research-based tasks and preparing formal documentation. It also encouraged me to approach future projects with greater attention to evidence, structure, clarity, and responsible communication.
